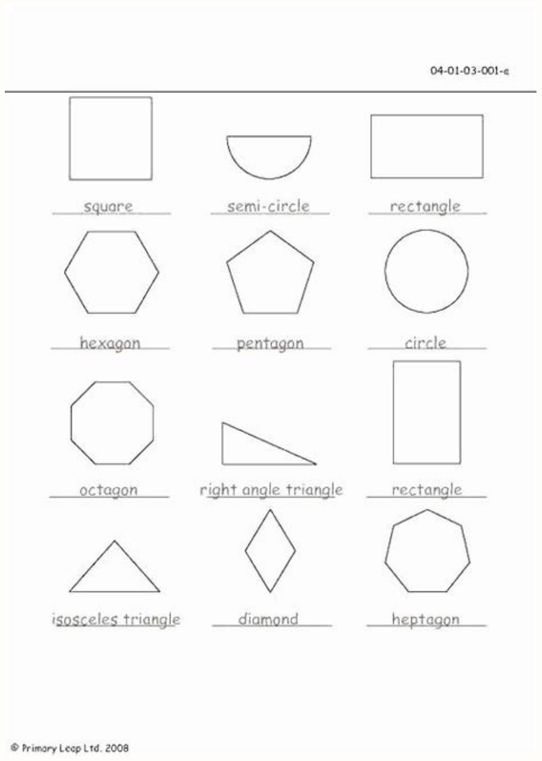
Polygon or not a polygon worksheet pdf template word free



Classify Polygons

Circle the shape name, and write the number of sides.

 Star Triangle Rectangle Pentagon Number of Sides: _____	 Octagon Triangle Hexagon Square Number of Sides: _____
 Square Pentagon Triangle Octagon Number of Sides: _____	 Triangle Star Square Pentagon Number of Sides: _____
 Pentagon Octagon Square Triangle Number of Sides: _____	Pentagon Triangle Hexagon Rectangle Number of Sides: _____
Triangle Square Rectangle Pentagon Number of Sides: _____	Hexagon Pentagon Octagon Star Number of Sides: _____

Name _____ Date _____ Period _____

Worksheet Unit 8.3 Area and Perimeter of Regular Polygons

Find the area of each regular polygon. Round your answers to the nearest tenth.

1. An octagon with an apothem 4.8 centimeters long and a side 4 centimeters long

2. A square with a side 24 inches long and an apothem 12 inches long

3. A hexagon with a side 23.1 meters long and an apothem 20 meters long

4. A pentagon with an apothem 316.6 millimeters long and a side 460 millimeters long

Find the apothem, area, and perimeter of each regular polygon. Round your answers to the nearest tenth.

5. 
6. 
7. 
8. 
9.

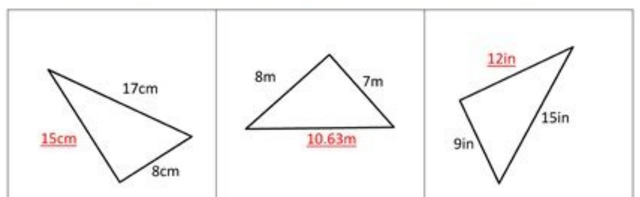
10. 
11. Find the area of a square with a radius of length $6\sqrt{2}$.

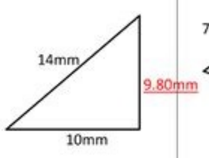
12. Find the apothem of a regular hexagon of side length 12.

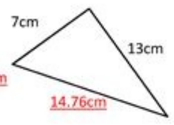
13. Find the perimeter of an equilateral triangle with radius 12.

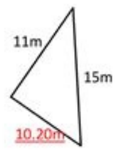
Name Date

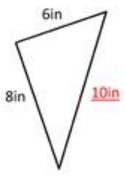
PYTHAGORAS' THEOREM QUESTIONS 3 ANSWERS

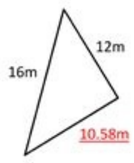


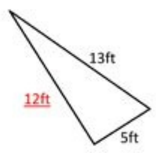












Free Math Sheets, Math Games and Math Help
MATH-SALAMANDERS.COM

Find the triangle number, the given polyavers are divided and then find the sum of the number. (What is this ...?) (Review) Two last things before going: a polyman has to have straight sides, you know; And a polygon has to be a closed form. Write the number of sides of the given polymonos. See how different different polyics can now name that you understand the central ability. Students will identify each image by naming their form. This is a completely solved problem for you. The students will identify the polymonos. Eight problems are provided. Example problem: If the sum of the interior unions of a polygon is equal to 2340 °, what is the measure of the outer number of the given polygon? Students will find the measure of the external ones indicated of a polygon. Students will demonstrate their identification domain of forms based on the sum of their internal ã ã¡ngles. Hept means seven; Octo means eight. Draw a quadrilal that adjusts to the descriptions. This worksheet explains how to identify polyvons. Students will use the figures provided to find the requested measures. How many degrees are found in each number of these forms? Students will name each polygon. Students will name the described way. What is the measure of each outer number in the 21 -sided polygon? Penta means five, and Hexa means six. The table of this lecion shows the name of the shapes and the number of sides they have. This worksheet explains how to determine how many genes needs to measure to identify the corresponding ones. These forms surround Alan in his daily life, and he is very excited to take a tour of the polyps of the real world! Lyrics of the Songs: Tri is a prefix that means three; Trys have three sides like a candle in the sea. I know etneidnopserroc etneidnopserroc ed serap sod ela±Ães :olpmeje ed samelborP ?onogÃlop nu otse se¿Á ,secnotnE .sonogÃlop ed n³Áicacifitnedi ed oinimod us n¡Ãrartsomed setnaidutse soL .otof al ne amrof adac ed erbmon le n¡Ãribircse setnaidutse soL .samelborp sies Students will find the measurement of the inner angles of a polygon. Example problem: What is the measure of each outer angle in a regular dodecah? You will break geometric forms (polígonos) in triangles and answer questions and find measures within the form. Use the skills you've learned to identify each form by your image. Students will label every form. Example exercise: What is a polygon called if each outer angle is equal 45°? Tri (Three!), Quad (Cuatro!), Penta (Five!), Hexa (Six!), Hetpa (Seven!), Octo (Ocho!), Nona (Nine!), Deca (Ten!) Tri means three; quad means four. Students will name the forms that are formed by putting the flat sides in each set of forms. For each figure provided, students will name the polygon. Imagine that you are putting any of the 2 forms with the bold side in another way with the bold side, so that the daring sides are placed on each other. How many degrees are there in every inner angle of a seven-sided polygon? Students will find the angle measurement of a polygon. This worksheet explains how to draw a polygon based on a description. And nona is a prefix that means nine; the nonagones have nine sides as a "y" on a road sign. No. But is it a polygon? Hexa - a prefix that means six; hexagons have six sides as a bolt we rotate. Students will demonstrate their competence with this ten-problem exam. This worksheet explains how to find the measurement of each outer angle of a pentagon. How many degrees do each angle in a regular measure of the pentagon? Students will find the measurement of the indicated external angles. If the sum of the inner angles of a polygon is equal to 3060°, what is the measurement of each inner angle of the given polygon? How many triangles aredivide a regular pentagon from one point? Students will read every description and name the form. Students will fill the number of sides or angles for each form.yrtemmySsepahs tneurgnoc dna ralimis gniyfitnedi no elbatnirPsepahS tneurgnoC dna ralimiSsepahs)D3(dilos rof steehskrow yrtemoeGsepahS diloS.stniop gnittolp dna ,sriap deredro ,sdirg etanidrooc gnihcaet rof steehskroWsteehskroW yrtemoeGedarG dn2 ot netragredniK.sepahs dilos rof nmuloc a dna ,sepahs talf rof nmuloc a si erehT .nogylop a fo eman eht enimreted ot woh snialpxe teehskrow sihT .ngis klaw enoz loohcs a ekil sedis evif evah snogatnep ;evif snaem taht xiferp a si atneP .selgna roiretni rieht fo mus eht no desab snogylop yfitnedi ot woh weiver stnedutS .devlos si melborp elpmas A ? Students check how to find the measure of the outer ones of a hept of a hept. What is the measure of a central unit every inner unit of the polygon is 540 °? Octo is a prefix that means eight; The octogones have eight sides as the shape of a high -site. A sample problem is solved and two practical problems are provided. Quad is a prefix that means four; The quadrilas have four sides like a door. gate.
